

# RISK MANAGEMENT

Advance with Confidence

In an era of disruption, it is essential to have complete confidence that all potential risks within an organization are identified. The ability to balance between embracing the right risks and identifying the wrong ones enable companies to operate more effectively.

Risk Management, a solution on the Connected Risk platform, equips your organization with the tools needed to benefit from both risk and disruption.

It empowers decision makers and risk professionals alike – giving you confidence when accepting risk with dependable and complete data supporting your decisions.

Your risk appetite can be defined and tracked at any point within your data structure. This provides a more dynamic view of risk, while monitoring and accommodating varying sensitivities to risk across functions and processes. Any breach of risk tolerance is reportable, with associated alerting. This, allied to powerful data mapping, allows for the creation of a tailored risk management solution to match the firm's exact methodology and ethos.

Risk Management empowers your teams to have a more agile approach to risk through a flexible assessment engine, which uses dynamic building blocks that align with your business's unique methodology. Powerful data mapping capabilities draw on many sources of data when completing the assessment, allowing you to mould each assessment to your exact requirements.

While traditional solutions are built on preconceived use cases, often leaving little flexibility, Risk Management offers a more fluid approach that allows you to tailor your own risk solutions on our platform or take our out-of-the-box solution and refine it, as necessary.

Risk Management allows you to create indicators for risks and controls and quickly capture risk incidents and assess their impact.

All collated risk data is exposed through the integrated reporting engine that allows for the configuration of reports, charts, and heat maps and interactive, drillable dashboards and advanced visualizations bring the risk profile to life so that you can Advance with Confidence.

## What's Included

Our Risk Management solution has a large range of features available out of the box.
