

# empowered Risk Management

Connected Risk offers a comprehensive, flexible, and scalable ERM platform that helps organizations identify, assess, and manage risks effectively. With customizable workflows, real-time monitoring, and advanced analytics, it streamlines risk management and ensures regulatory compliance. Its modular design integrates seamlessly into existing frameworks, enhancing resilience and informed decision-making.

## KEY FEATURES

### Risk Identification & Assessment

Capture, categorize, and evaluate risks in real time using configurable frameworks.

### Centralized Risk Register

Maintain a single source of truth for all enterprise risks, with detailed risk profiles and historical data tracking.

### Advanced Reporting & Analytics

Generate custom reports, visualize trends, and gain actionable insights into enterprise-wide risks.

### Risk Mitigation & Controls

Define mitigation plans, assign ownership, and track effectiveness through integrated control testing.

### Automated Risk Monitoring

Leverage real-time dashboards, risk heatmaps, and automated alerts to continuously track key risk indicators.

### Workflow Automation

Streamline risk processes, automate approvals, and enhance cross-functional collaboration.

## WHAT'S INCLUDED

- |                                                                                                         |                                                                                                       |                                                                                                          |
